PORTABLE HUMIDITY CONTROL

IT'S NOT JUST THE HEATING & COOLING, IT'S THE HUMIDITY TOO. SO TRUE!

As the largest independent supplier of portable climate control in Canada, ICS Group proudly offers tailored, portable HUMIDITY CONTROL solutions that address the specific needs of your projects.

From protecting valuable components on your Construction site to enhancing the productivity of your workforce, our Solution Representatives will consult with you to create a project-specific HUMIDITY CONTROL solution that is anything but ordinary.

POPULAR HUMIDITY CONTROL TREATMENTS INCLUDE:

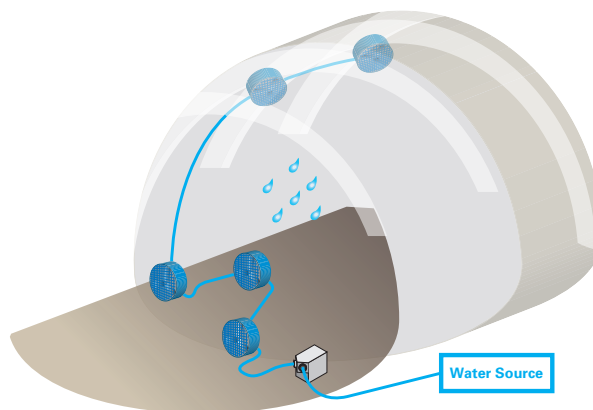

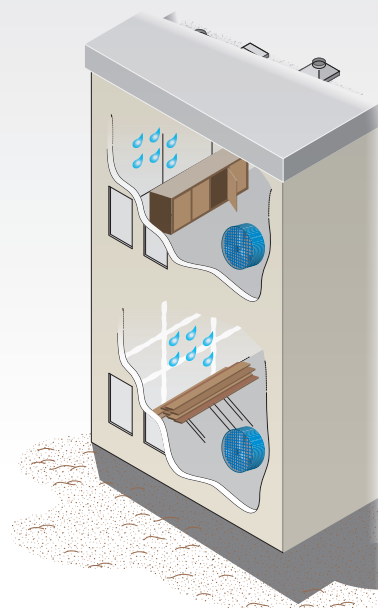

Architectural Finishing: Controlling interior relative humidity ensures expensive millwork, paneling, doors, mouldings and beams are not subject to warping and splitting due to fluctuations in temperature and humidity. ICS Group's HUMIDITY CONTROL solution remains operating until activation of the building's permanent HVAC and humidifier systems.

Electrical Equipment: Electrical installations and Computer Server rooms can be vulnerable to dust & static electricity if ambient conditions are too dry. Providing the appropriate relative humidity can assist in protecting large-scale electrical assets.

Process / Productivity / Comfort: Warehouses, distribution centres, and manufacturing facilities enjoy multiple benefits when using portable HUMIDITY CONTROL. It allows goods to be manufactured/stored under optimal conditions. Plus, employee comfort and productivity is enhanced when you create a comfortable work environment.

LISTEN. DESIGN. DELIVER.

A consultative approach. A made-to-order solution that meets your objectives. Super service and support. Beat the dry heat this summer with an ICS Group HUMIDITY CONTROL solution that delivers maximum benefits while keeping your project on-time and on-budget.
